PROJECTS

BLOOD BANKING SYSTEM | MERN Stack

- Implemented user registration, login, and profile functionality for administrators, users, hospitals, and organizations, enhancing project accessibility and user experience.
- Developed engaging and user-friendly interfaces using React.js and Material UI, while utilizing Node.js and Express.js for server-side logic and API handling. Leveraged MongoDB and Mongoose to ensure efficient data storage and retrieval.
- Incorporated user registration, login, update, and distinct profiles for administrators, users, hospitals, and organizations, ensuring seamless navigation and efficient interaction within the project.

Library Management System | MERN Stack

- Designed and implemented user-friendly interfaces using React, enabling efficient book search, checkout, and user registration.
- Built a robust server using Node.js and Express.js, creating RESTful APIs for book and user management.
- Set up MongoDB, defining an optimized database schema to manage book, user, and transaction data effectively.
- Implemented user authentication using JWT for secure access.
